

Invendor Advisory Ltd.

SUPPLY CHAIN

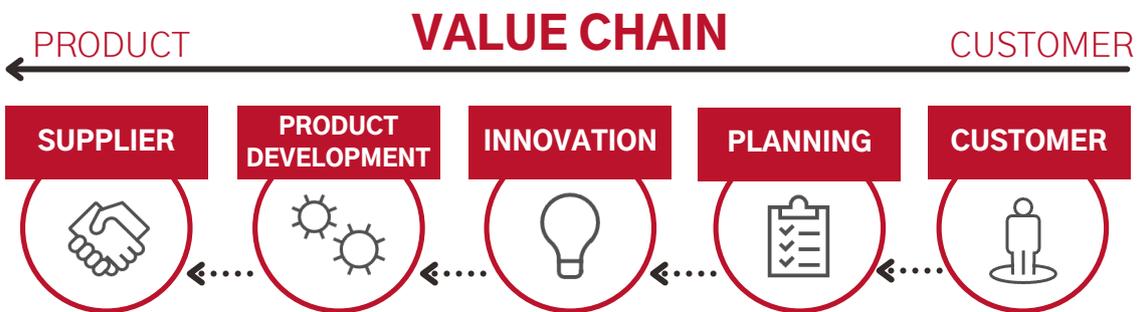

Invendor has proven methods to **automate and support** the digitalisation of your supply chain operations. Our goal is to **create net value** by building a **competitive logistic infrastructure** which **synchronizes supply with demand** and measure supply chain performance according to your needs.

What is Supply Chain and Value Chain?

Supply Chain is described as a tool of business transformation, which **minimises costs** and **maximises customer satisfaction** by providing the **right product** at the **right time** at the **right place** and the **right price**.

Value Chain is a way of getting a **competitive advantage**, through which a company can beat its competitors along with **fulfilling customer requirements**. At Invendor we use the value chain as **a tool to determine a general problem in a structured way**. Consider it a search pattern within a company's processes. Examples are general quality problems or increasing costs; we would examine each step in the chain and pin-point the exact root-cause.

The reason we tend to associate the Supply Chain with the Value Chain is because ultimately, **Supply Chain Activities**, such as inbound logistics, manufacture/production, and outbound logistics, **offer many direct opportunities to add value for customers/consumers**. The shift toward value-chain thinking has led most businesses to focus less on cost reduction in the Supply Chain and instead, seek ways to leverage value adding opportunities.

OUR APPROACH

Our approach is simple — we start off with **your customer at the center**. Supply Chain processes are horizontal and work across internal, vertical organisations to deliver value to customers. People, process, technology and assets must work seamlessly, **meeting and exceeding customer expectations** to win in today's challenging environment.

We first look at your business goals and then work with you to establish your **Supply Chain goals** by providing an initial assessment. This approach will provide insights into areas such as **Planning, Inventory, Logistics, Returns** and your **Organisation**. Thereafter we can agree on the next steps such as further study, action plan etc.

SUPPLY CHAIN INSIGHTS

- Do you have sufficient insight in your Supply Chain and how effective it is?
- We will do a systematic approach on your Supply Chain processes to provide insight into areas for improvements.

SUPPLY CHAIN PLANNING

- Do you often have to say no to your customers because products are not available?
- We will help you to identify the right planning process for your company. We will introduce or improve your Sales & Operating Planning, a proven method to bring together all the relevant stakeholders and align on a final plan allowing you to serve your customers with confidence

INVENTORY OPTIMIZATION

- Are you struggling to keep your inventory levels under control?
- We will conduct an inventory analysis to improve your product flow and reduce your working capital.

SUSTAINABLE LOGISTICS

- Are you concerned your Supply Chain is not doing enough to protect the environment?
- We will help you to design and implement sustainable solutions for your Supply Chain.

RETURNS MANAGEMENT

- Are you experiencing a high volume of returns and trying to find solutions to reduce this?
- We will help you to identify the underlying root-causes for the returns and propose effective solutions to reduce your costs

SUPPLY CHAIN ORGANIZATION

- Are you struggling to find the right people with Supply Chain experience to manage the new normal?
- We are here to help with interim management or support you to project manage the implementation of solutions and /or systems
